**BLS and Stadler sign contract
for the acquisition of 52 new trains**

BLS is to purchase 52 latest-generation Flirt trains. The Flirt will replace three older train models, enabling BLS to push ahead with the planned expansion of regional transport in the Berne area. Peter Spuhler, President of the Board of Directors of Stadler, and BLS CEO Bernard Guillelmon signed a supply contract today.

Peter Spuhler, President of the Board of Directors of Stadler, and the CEO of BLS Bernard Guillelmon signed a supply contract today for the acquisition of 52 units of the latest-generation Flirt train. The Confederation, the cantons and the Board of Directors of BLS have approved the necessary resources for the purchase. Peter Spuhler is proud to be producing the latest-generation Flirt trains for BLS to follow on from the previous MUTZ double-decker multiple units. "We are particularly pleased to be able to deliver Swiss trains from Thurgau to BLS for this contract." Spuhler describes the new train as particularly lightweight and energy saving, with extra comfort and security for passengers. "We were convinced by Stadler's offer for the largest train acquisition in the history of BLS. We are pleased to be developing the new trains with Stadler, and look forward to offering our passengers an even more comfortable and reliable means of transport to their destinations in the future", commented BLS CEO Bernard Guillelmon on signing the contract.

BLS has taken out options for a standardized fleet

BLS will use the 52 new trains to replace three older models and harmonize its fleet. Operations, planning and maintenance will be greatly simplified as a result. In addition, BLS can now proceed with the planned expansion of regional transport in the canton of Bern. Measures envisaged by the canton include running trains at 15-minute intervals in the main perimeter of the Bern commuter rail network. 28 trains will be put into service on various commuter rail routes in Bern. BLS is initially only ordering 24 trains rather than 30 for regional express traffic because the Bern-Neuchâtel-La Chaux-de-Fonds line will no longer form part of its regional network in the future. Instead, it will operate as a long-distance route. To make sure that BLS is well equipped for future developments and to guarantee the uniformity of the fleet in the long term, BLS is taking out an option for a further order of trains of the same type.

Customers have their say in the design of the new trains

From mid-2018 Stadler will create a full-scale model – or maquette – in its Bussnang factory. BLS and Stadler will confirm the design of the new trains on the basis of this maquette. The model will help determine elements such as the fittings in the boarding areas, the type and upholstery of the seats, and the size of the

tables. To take the needs of passengers into account as much as possible, BLS is involving various customer representatives in the process, such as Pro Bahn, selected passengers, and organisations for disabled travellers. Stadler is expected to start building the first railcar bodies in early 2019. The first trains should be ready to be tested on track by mid-2019. BLS will put the trains into operation gradually between 2021 and 2025.

The new trains are one-storey high and 105 meters long. The trains for commuter rail transport (28 units) and regional express transport (24 units) are technically identical. Both the commuter rail and regional express trains have a low-floor design and spacious boarding areas with standing room, large windows, storage spaces, plug sockets in 1st and 2nd class, and good mobile phone reception. There will also be a catering area on the regional express trains.

About Stadler

Stadler has been building trains for 75 years. The system provider of rail vehicle construction solutions is headquartered in Bussnang in Eastern Switzerland, and has a workforce of over 7000 based in various production, service and engineering locations across Switzerland, Germany, Spain, Poland, Hungary, the Czech Republic, Belarus and the United States. Service locations are also being operated in countries including Algeria, Denmark, France, Italy, the Netherlands, Norway, Russia, Sweden and the UK. Stadler provides a comprehensive range of products in the heavy and urban transport segments: High-speed trains, intercity trains, regional and commuter rail trains, underground trains, tram trains and trams. Furthermore, Stadler also manufactures main-line locomotives, shunting locomotives and passenger carriages, including the most powerful diesel-electric locomotive in Europe. Stadler is the world's leading manufacturer in the rack-and-pinion rail vehicle industry.

More Stadler figures: The best-selling FLIRT (Fast Light Intercity- and Regional Train) vehicle has already sold over 1400 units in a total of 17 countries. The KISS (the name is an acronym of the German for Comfortable Innovative Speedy Suburban Train) is also very popular: It has sold 271 units in 10 countries. The most powerful diesel-electric locomotive in Europe, the EURO4000, has sold 140 units in 7 countries. Additionally, Stadler Service maintains vehicle fleets comprising over 680 vehicles that cover a combined annual distance of 120 million kilometers in 16 different countries.
